

THE FOUNDATION

SYNTHERA

SYNTHERA is the trust and coordination foundation for multi-agent systems. It operates the open VAID standard at enterprise scale – one identity, one policy engine, one audit-of-record for every agent, framework and cloud above it.

WITHOUT IT

Every team building with agents writes its own enforcement, audit and policy logic – once per framework, once per cloud. Rules drift between systems, logs don't reconcile, and nothing is verifiable end to end.

WITH IT

One deterministic policy engine and one audit-of-record cover every framework and cloud you run. Rules are authored once and enforced identically everywhere, and the record is tamper-evident.

WHAT IT IS

Trust & coordination foundation

BUILT WITH

Rust core · one canonical source of truth

PROVEN ACROSS

ADK · LangChain · OpenAI adapters

STAGE

Pre-pilot · runs live on Cloud Run

WHERE IT FITS

SYNTHERA is what running the VAID standard at enterprise scale looks like – the single foundation every product, and every agent you build, sits on.
